• Improves customer satisfaction levels

Lower Costs

• Reduce administration costs by around £4K per annum per surveyor

• Increase productivity by 20% per day

• Significant reduction in travel time and fuel costs

• The time taken to complete a survey can reduce by 12 hours

The Growth of Mobile Working

The mobile market continues to grow at a rapid rate, with the use of mobile phone and hand-held PC's now being commonplace across all industries. Even the most traditional organisations are embracing mobile technology in a bid to capture, share and manage information electronically and gain a competitive edge.

Mobile solutions are being used today by organisations of all sizes, across most industries and most probably by your competitors.

eSquiggles – Modern, Affordable, Proven

Mobile working technology has emerged as a business solution which is easy to implement, requires low levels of end-user training and on average has a quick turnaround on achieving return on investment. eSquiggles is a mobile working solution which is achieving exactly that.

Do your surveyors return to the office regularly? Have you considered the unnecessary cost of return trips? Our experience shows that an organisation could save £4K per surveyor per annum in administration costs. By freeing your surveyors from their desks and from administration, they can perform the following in real-time:

- capture data
- complete electronic forms
- access data stores
- produce complex surveys
- return surveys instantly

All of this can be performed on-site electronically using hand-held PC's – removing the paper-trail and significantly increasing productivity.

Capture data and produce final surveys automatically.

Why eSquiggles?

There are a multitude of mobile working solutions available in the market. However, many have been built as an extension of specialist IT systems within different industries, eg. housing or construction IT systems. The majority of these solutions are expensive, complex to implement and can only integrate with specific IT management systems.

eSquiggles is different.

It has been designed through close consultation with leading surveying companies. Our Consultants understand the working practices of surveyors and the challenges they face. eSquiggles has been designed against the backdrop of these working practices and challenges.

eSquiggles is flexible and affordable to all – which is one of the key differentiators. No matter how big or small your organisation is and no matter what level of technical skills you have in-house – eSquiggles will exceed your business requirements.

Purchasing models include ASP (application service provision) or traditional licensing model. The ASP option means no major investment in IT software, hardware or support services.

Essentially, the users are renting the software rather than buying it outright and are charged on a 'pay as you go' type basis.

Integration and building on existing IT investment is important. eSquiggles will interface with your existing systems, allowing users to 'push' or 'pull' information in real-time when they are on-site.

Key Features

- Sends allocated tasks to a surveyor's hand-held PC
- Captures data on hand-held PC and sends back electronically
- Produces complex surveys automatically
- Comprehensive set of electronic forms available
- Access to on-line business information, email and calendar
- Hand-held PC doubles as a mobile phone, camera, etc.
- Supports photo, video and voice recording to simplify data collection
- Interfaces to existing IT systems

improve productivity
of surveyors.*

Affordable mobile working for any size of organisation.

Survey & Document Creation

eSquiggles can produce long, complex surveys automatically, by using templates and pulling data in from the hand-held PC. Surveys are easily tailored to an organisations' requirements, and can be designed by your in-house staff. Microsoft Word 2003 is used as the output mechanism for surveys and other documentation such as letters to clients, supporting reports, etc.. Management reporting is also available and can allow an organisation to easily report back on Key Performance Indicators (KPI's).

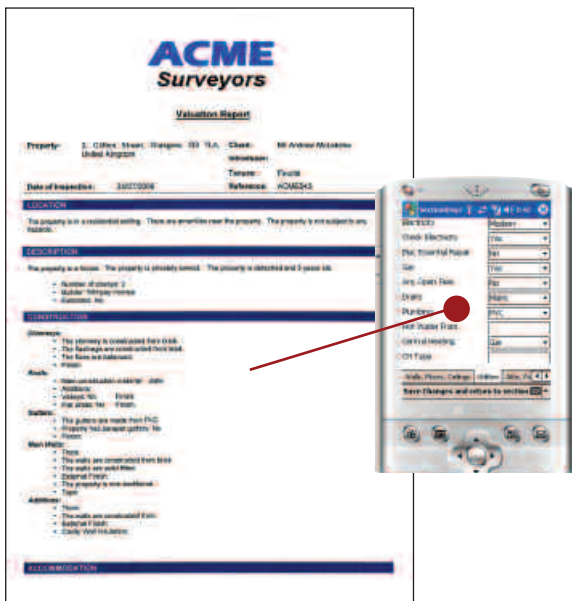

Figure 1: Convert data on hand-held PC to a final survey automatically

User Friendly

eSquiggles is extremely intuitive and user friendly and is designed to guide the surveyor through the electronic forms on-site. The flexibility of eSquiggles means that an organisation can tailor the layout and structure of the electronic forms and can make adjustments at any time, as maybe required by changing legislation or schemes such as the Home Information Pack (HIP).

Low Cost Hand-Held PC's

As part of standard contracts with mobile phone providers, hand-held PC's which are capable of running eSquiggles, are low cost and often free! This makes the cost of using mobile working technology more cost effective, with minimal hardware costs. Our Consultants can advise on the best hand-held devices to use and how to obtain them.
